# Exploitation of Wastes and Residues via Biological Processes in the Concept of Bioeconomy

### Message from the Guest Editors

Regarding the circular economy concept, efforts should be focused on the minimization of wastes generation by elongating the lifetime of materials through actions such as recycling and reuse. However, the generation of wastes and residues is inevitable at some point, and as such a new concept of circular economy-the bioeconomy—has recently gained great attention. In a bioeconomy, the wastes and residues of anthropogenic activities are approached as resources of valuable molecules and compounds via various methodologies such as extraction, recovery, and conversion, thus tackling environmental and economic issues at the same time. This Special Issue aspires to gather novel research papers covering the topic of exploitation/valorization of wastes and residual biomass using biological processes. The target feedstocks include but are not necessarily limited to municipal, agroindustrial, and industrial wastes and wastewaters, agricultural and forestral residues etc. could be fractionated, bioconverted, or biotransformed for the generation of high-added-value substances, compounds, and molecules

## **About the Journal**

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

### Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

#### **Author Benefits**

### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

### **High Visibility:**

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.
