

## Special Issue

# Sustainability in Fruit Production and Core Collections with Special Regards to Climate Change

### Message from the Guest Editors

Climate change has complex effects on the fruit industry, because orchards are long-term investments that are located outside under special site conditions. For successful production year after year, the perennial fruit species must tolerate the local climate and soil conditions well. In an intensive orchard, the tree height is limited; however, their production and yield is much higher compared with traditional orchards. During the orchard maintenance period, some dedicated activities (e.g., irrigation, cover, special support system, special spraying technology, and planting local bred rootstocks/varieties) can be made to increase the “well-being” of the fruit trees, grafted on a rootstock or planted on their own roots, in order to increase their production, yield, and fruit/nut quality. Another important issue is that intensive orchards are particularly labour intensive. However, manpower is limited today, so during the maintenance activities of an orchard, one must also take into consideration this phenomenon. Modern techniques (mechanical/chemical fruit thinning and the usage of drones) can help growers decrease labour costs during production...

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1  
(Geography, Planning and Development)
