Message from the Guest Editor

Dear Colleagues,

A plethora of problems from diverse disciplines such as applied mathematics, dynamics of physical systems, mathematical biology, chemistry, economics, physics, statistics, and also engineering, to mention a few, can be written in solving an equation or systems of equations in abstract spaces such as the Euclidean space, Hilbert, Banach or other spaces. The solution is preferred in closed form, but this is possible only in special cases.

That is why researchers and practitioners are resorting to developing iterative methods generating a sequence converging to the solution under certain conditions on the initial data. Therefore, we invite papers in this and related areas. Papers solving ordinary or partial differential or integral equations in abstract spaces are especially invited.

Specially selected review papers connecting this with other areas are also welcome.

Message from the Editor-in-Chief

Symmetry is ultimately the most important concept in natural sciences. It is not surprising then that very basic and fundamental research achievements are related to symmetry. For instance, the Nobel Prize in Physics 1979 (Glashow, Salam, Weinberg) was received for a unified symmetry description of electromagnetic and weak interactions, while the Nobel Prize in Physics 2008 (Nambu, Kobayashi, Maskawa) was received for the discovery of the mechanism of spontaneous breaking of symmetry, including CP symmetry. Our journal is named *Symmetry* and it manifests its fundamental role in nature.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

Journal Rank: JCR - Q2 (*Multidisciplinary Sciences*) / CiteScore - Q1 (General Mathematics)
