Message from the Guest Editor

Dear Colleagues,

Symmetry is one of the science fields that links nature and engineering. This field allows you to deeply study the natural processes and structures of materials and then use them highly efficiently in inventive activities in engineering and materials science. It is estimated that around 70 percent of all technical innovations depend directly or indirectly on materials. Materials science and engineering constitute a particularly interdisciplinary and heterogeneous scientific field. It is important to pay attention to the balance between symmetries and asymmetries; their analysis, combination and skillful use will enable perspective, high-quality designs and technologies.

This Special Issue is devoted to the development of new perspective constructions and materials, the assessment of their quality and the effectiveness of their application in practice. In addition, the Special Issue will accept work to modernize existing systems and technologies using innovative methods such as the principles of symmetry, decision theory and systems approach. Particular attention is paid to interdisciplinary research with results at the intersection of sciences.

Message from the Editor-in-Chief

Symmetry is ultimately the most important concept in natural sciences. It is not surprising then that very basic and fundamental research achievements are related to symmetry. For instance, the Nobel Prize in Physics 1979 (Glashow, Salam, Weinberg) was received for a unified symmetry description of electromagnetic and weak interactions, while the Nobel Prize in Physics 2008 (Nambu, Kobayashi, Maskawa) was received for the discovery of the mechanism of spontaneous breaking of symmetry, including CP symmetry. Our journal is named *Symmetry* and it manifests its fundamental role in nature.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

Journal Rank: JCR - Q2 (*Multidisciplinary Sciences*) / CiteScore - Q1 (General Mathematics)
