Deadline for manuscript  
submissions:

**closed (31 August 2021)**

### Message from the Guest Editor

Symmetry presents harmonic beauty in many ways, in fields such as the arts, music, and science. The unique properties of semiconductor materials vividly manifest the beauty of symmetry in nature. 1D, 2D, or 3D semiconductor materials are built by atoms arranged in a highly symmetric crystal lattice that extends in one, two, or three directions, respectively. Some 1D and 2D materials with reduced in-plane symmetry exhibit strong in-plane anisotropy in their optical and electronic properties that allow for the realization of new electronic and photonic devices. Symmetry and asymmetry optical cavities are essential for photonic devices. Optoelectronic characteristics can be designed by arranging optical nanostructures or by breaking symmetry. The newly emerging field of topological quantum material, which includes topological insulators and semimetals, is another intriguing example of natural symmetry. These devices' exotic electronic properties hold great promise for future quantum devices...

## Editor-in-Chief

### Prof. Dr. Sergei Odintsov

CSIC), C. Can Magrans s/n, 08193  
Barcelona, Spain

## Message from the Editor-in-Chief

Symmetry is ultimately the most important concept in natural sciences. It is not surprising then that very basic and fundamental research achievements are related to symmetry. For instance, the Nobel Prize in Physics 1979 (Glashow, Salam, Weinberg) was received for a unified symmetry description of electromagnetic and weak interactions, while the Nobel Prize in Physics 2008 (Nambu, Kobayashi, Maskawa) was received for the discovery of the mechanism of spontaneous breaking of symmetry, including CP symmetry. Our journal is named *Symmetry* and it manifests its fundamental role in nature.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within SCIE (Web of Science), Scopus, CAPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

**Journal Rank:** JCR - Q2 (Multidisciplinary Sciences) / CiteScore - Q1 (General Mathematics)
