Message from the Guest Editors

Dear Colleagues,

In this Special Issue, we mainly discuss the application of symmetry in various SHM and NDT/NDE of structural systems including but not limited to:

Application of signal processing methods for analyzing the symmetric information in SHM and NDT.

Numerical and FE analyses with reduced computational time in acquiring SHM information for symmetric structures.

Symmetric engineering structures and their SHM methodologies.

Mathematical modeling of symmetric engineering structures for SHM and NDT.

Symmetry in sensors arrangements/placements and methods of data collection for SHM and NDT.

Symmetric computational techniques for structural health monitoring.

Application symmetry in structural health monitoring and reliability estimation.

Symmetry beauty in engineering structural health monitoring.

Message from the Editor-in-Chief

Symmetry is ultimately the most important concept in natural sciences. It is not surprising then that very basic and fundamental research achievements are related to symmetry. For instance, the Nobel Prize in Physics 1979 (Glashow, Salam, Weinberg) was received for a unified symmetry description of electromagnetic and weak interactions, while the Nobel Prize in Physics 2008 (Nambu, Kobayashi, Maskawa) was received for the discovery of the mechanism of spontaneous breaking of symmetry, including CP symmetry. Our journal is named *Symmetry* and it manifests its fundamental role in nature.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within SCIE (Web of Science), Scopus, CAPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

Journal Rank: JCR - Q2 (*Multidisciplinary Sciences*) / CiteScore - Q1 (General Mathematics)
