Message from the Guest Editors

Recently, probabilistic models play a significant role in information sciences and aerospace operation technologies. To some extent, improving the intelligence of aerospace systems benefits from fast-developing probabilistic modeling approaches, including Bayesian estimation, statistical inference, data mining, machine learning, Gaussian process regression, random matrix, stochastic optimization, Monte Carlo simulation, etc., thus promoting technique emergence in aerospace science and engineering.

This Special Issue is devoted to recent advances in probabilistic models related to the analysis and use of symmetries in multidisciplinary areas of aerospace systems. The Special Issue aims to provide a way for people studying in mathematics, information science, system engineering, or other related fields to disseminate their findings about symmetries. Papers on topics of interest, including but not limited to the listed keywords, are solicited.

Message from the Editor-in-Chief

Symmetry is ultimately the most important concept in natural sciences. It is not surprising then that very basic and fundamental research achievements are related to symmetry. For instance, the Nobel Prize in Physics 1979 (Glashow, Salam, Weinberg) was received for a unified symmetry description of electromagnetic and weak interactions, while the Nobel Prize in Physics 2008 (Nambu, Kobayashi, Maskawa) was received for the discovery of the mechanism of spontaneous breaking of symmetry, including CP symmetry. Our journal is named *Symmetry* and it manifests its fundamental role in nature.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

Journal Rank: JCR - Q2 (*Multidisciplinary Sciences*) / CiteScore - Q1 (General Mathematics)
