Brain Asymmetry of Structure and/or Function

Guest Editor:

Emeritus Prof. Lesley J. Rogers, B.Sc.(Hons), D.Phil., D.Sc., FAA
School of Science and Technology, University of New England, Armidale, NSW 2351, Australia

Deadline for manuscript submissions:
closed (15 July 2017)

Message from the Guest Editor

Left–right asymmetry is an important characteristic of the brain, as we now know from studies of many vertebrate species and, more recently, from studies of invertebrates. The commonality of this feature of the brain suggests that it affords all, or many, brains advantages in cognitive processing by, for example, allowing parallel and different processing of inputs on each side of the brain and by each side controlling different sets of outputs [...]

Message from the Editor-in-Chief

Symmetry is ultimately the most important concept in natural sciences. It is not surprising then that very basic and fundamental research achievements are related to symmetry. For instance, the Nobel Prize in Physics 1979 (Glashow, Salam, Weinberg) was received for a unified symmetry description of electromagnetic and weak interactions, while the Nobel Prize in Physics 2008 (Nambu, Kobayashi, Maskawa) was received for the discovery of the mechanism of spontaneous breaking of symmetry, including CP symmetry. Our journal is named *Symmetry* and it manifests its fundamental role in nature.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within SCIE (Web of Science), Scopus, CAPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.
Journal Rank: JCR - Q2 (*Multidisciplinary Sciences*) / CiteScore - Q1 (General Mathematics)
