Message from the Guest Editors

Dear Colleagues,

In the study of partial differential equations (PDE), "blow-up" or "singularity" means the breakdown of a system within a finite time. The singularity formation in nonlinear physical systems has been attracting the attention of many physics and mathematics researchers because of its physical significance and mathematical challenge. In this regard, the lifespan of a PDE system is the maximal time before which the solutions exist and are sufficiently smooth.

In the study of PDE, it is expected that symmetry assumptions or reductions can facilitate the study of the lifespan of the non-linear partial differential systems. In order words, symmetry is especially useful to analyze simpler cases of some complex systems.

In this Special Issue, we expect that theoretical or numerical study of the lifespan of non-linear PDE, can be developed. To contribute to this Special Issue, we expect that the theoretical analysis can establish a sufficient condition on initial data that guarantees that the lifespan of the systems is finite...

Special Issue

Message from the Editor-in-Chief

Symmetry is ultimately the most important concept in natural sciences. It is not surprising then that very basic and fundamental research achievements are related to symmetry. For instance, the Nobel Prize in Physics 1979 (Glashow, Salam, Weinberg) was received for a unified symmetry description of electromagnetic and weak interactions, while the Nobel Prize in Physics 2008 (Nambu, Kobayashi, Maskawa) was received for the discovery of the mechanism of spontaneous breaking of symmetry, including CP symmetry. Our journal is named *Symmetry* and it manifests its fundamental role in nature.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.
Journal Rank: JCR - Q2 (*Multidisciplinary Sciences*) / CiteScore - Q1 (General Mathematics)
