Message from the Guest Editor

It is important to address environmental issues, together with SCM, in green supply chain management (GSCM). There is also a growing need for the integration of green practices into SCM research, not only to decrease the negative environmental impact of industrial development, but also to establish a competitive advantage through value creation.

This Special Issue explores research perspectives and scientific approaches to identifying a set of System Dynamics Modeling practices and processes to achieve more competitive or efficient GSCM. The main research topics include:

- Closed-loop supply chains;
- SCM with reverse logistics flows;
- SCM with recycling processes;
- Green supply chain modeling;
- Inventory management and green supply chains;
- Information visibility and green supply chains;
- Product diversity and the environment;
- The use of parts recovery and material recycling for SC value creation;
- Purchasing, manufacturing, distribution, and green supply chains;
- Product–service systems and environment.

Chair, Department of Systems
and Information Engineering,
University of Virginia,
Charlottesville, VA 22904, USA

Message from the Editor-in-Chief

Systems is a leading venue for the quick and global dissemination of results of cutting-edge research in various areas of systems science and systems-related fields. An increasing number of researchers are realizing the enormous potential of systems thinking in managing the many unprecedented and complex issues in all areas of need. The *Systems* journal provides a home of exceptional quality for the manuscripts of these researchers who often find it difficult to publish their work in conventional discipline focused journals.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SSCI (Web of Science), dblp, and other databases.

Journal Rank: JCR - Q1 (Social Sciences, Interdisciplinary) / CiteScore - Q2 (*Modeling and Simulation*)
