

## Fibrous Materials (Textiles) for Functional Applications

Guest Editors:

**Prof. Dr. Rajesh Mishra**

Faculty of Engineering, Czech  
University of Life Sciences, 16521  
Prague, Czech Republic

**Dr. Tao Yang**

Chair of Vibro-Acoustics of  
Vehicles and Machines, Technical  
University of Munich, 85748  
Munich, Germany

**Dr. Veerakumar Arumugam**

School of Material Science and  
Engineering, Nanyang  
Technological University, 50  
Nanyang Ave, Singapore 639798,  
Singapore

Deadline for manuscript  
submissions:

**closed (15 November 2021)**

### Message from the Guest Editors

We are pleased to announce a Special Issue titled “Fibrous Materials (Textiles) for Functional Applications” in Textiles, an open access MDPI journal. Fibrous/textile materials constitute an inseparable component of our day-to-day life. Their importance ranges from baby diapers to life-saving protective textiles in military and space applications. The geometrical flexibility and physical-chemical diversity of functional fibrous materials makes them a preferred substitute over metals, ceramics, and other forms of polymers. Fiber-based functional textiles are widely used in technical applications. e.g., acoustic textiles, electronic textiles, fiber-reinforced structural composites, geotechnical textiles, healthcare and medical textiles, nanoenabled textiles, protective textiles, smart clothing, sports textiles, thermos-regulating textiles, and so on.

The Special Issue is aimed at young researchers working on fiber-based functional materials in any concurrent application area. The exposure of young scientists to open access articles in the selected area will provide new insights for future research and innovation.
