Deadline for manuscript  
submissions:

**closed (30 June 2023)**

### Message from the Guest Editors

Responsible tourism has been a collective and pluralist conversation, and in the past decade, sustainability and digitalization through technology (e.g., digital platforms), have become two global issues of our time. As the global community strives to combat climate change, this Special Issue aims to spark lively academic debate on the role of digital technology as a key enabler of the green transition and reaching the United Nation's Sustainable Development Goals (UN SDGs). The Special Issue calls for tourism and hospitality research that offers novel perspectives to the so-called twin transition, whereby papers may address one or more of the interfaces between technology and the dimensions of sustainability, such as the social environmental, cultural, economic, political, legal, or ethical impacts of the twin transition.
