Message from the Guest Editors

Dear Colleagues,

Immense progress has been made in HIV care and treatment with a large scale up in the number of individuals diagnosed and put on life-saving antiretroviral treatment. Impressive progress has been made towards ending the HIV epidemic; however, in achieving the final step in controlling HIV, vulnerable populations must not be left behind. Vulnerable groups, such as children and adolescents, mobile individuals and migrants, and men who are susceptible to disengagement from care, must be the focus in the final step. For this Special Issue, we invite articles addressing HIV care engagement of these and other vulnerable populations as we seek to end the epidemic.
