Viral Hepatitis and Other Microbial Threats in Tropical Medicine

Message from the Guest Editor

“Viral Hepatitis and Other Microbial Threats in Tropical Medicine” provides a comprehensive overview of the current landscape of viral hepatitis and other significant microbial challenges in tropical and subtropical regions. While viral hepatitis continues to impose a substantial global health burden, this Special Issue expands its scope to include a wide range of microbial threats, including viral, bacterial, parasitic, and fungal threats that are prevalent in tropical regions. This Special Issue brings together cutting-edge research, clinical perspectives, and epidemiological studies to highlight both achievements and ongoing challenges in the fight against microbial threats in tropical medicine. The Issue seeks to inform global strategies aimed at reducing disease burden, combating antimicrobial resistance, and addressing health inequities in some of the world's most vulnerable populations.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. John Frean

Pathologist, Parasitology Reference Laboratory, Centre for Emerging Zoonotic and Parasitic Diseases, National Institute for Communicable Diseases, University of the Witwatersrand, Johannesburg 2192, South Africa

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Informit, and other databases.

Journal Rank:

JCR - Q1 (Tropical Medicine) / CiteScore - Q2 (Public Health, Environmental and Occupational Health)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 22.2 days after submission; acceptance to publication is undertaken in 3.8 days (median values for papers published in this journal in the second half of 2025).
