Tuberculosis: Novel Insights and Approaches to Tackle an Ancient Disease

Message from the Guest Editor

Tuberculosis (TB) has plagued humankind throughout history. Its causative agent (mycobacterium tuberculosis) was first identified in 1882 and yet, around 140 years later, TB is still estimated to affect around ten million people worldwide each year. The availability of effective vaccines and treatments has been insufficient to control TB and it is predicted that disease elimination will not be achieved in the coming decades without fundamentally rethinking our approach to control. This Special Issue focuses on highlighting recent findings in TB epidemiology that provide key insights for future TB control. We invite submissions of reports on a wide range of studies, including local investigations, international collaborations, systematic reviews, statistical analyses, and mathematical modelling analyses.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. John Frean

Pathologist, Parasitology Reference Lab, Centre for Emerging Zoonotic and Parasitic Diseases, National Institute for Communicable Diseases, University of the Witwatersrand, Johannesburg 2192, South Africa

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Informit, and other databases.

Journal Rank:

JCR - Q1 (Tropical Medicine) / CiteScore - Q2 (Public Health, Environmental and Occupational Health)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 19.2 days after submission; acceptance to publication is undertaken in 3.7 days (median values for papers published in this journal in the second half of 2024).
