Deadline for manuscript submissions:

closed (1 July 2024)

Message from the Guest Editor

This Special Issue will present leading studies on current water demand patterns and accurately project future patterns based on related data, including major case studies of water resources planning and management in cities.

Any proposed topics relevant to “decision making in water management” or “Water planning and allocation” projects or products are welcome. The following are some suggestions:

- Decision making is a difficult tradeoff between social, economic, environmental issues and sectoral impacts.
- Decision-making processes occur in all aspects of water resource management related to seasons, climate change, economic activities and population migration and growth.
- Clarify and define the rights of existing users, including their relationship to water availability.
- Develop a seasonal allocation of consumption and environmental water, system operation, implementation arrangements for environmental obligations, and related market operation and investment programs.
- Identify the nature and behavior of surface and groundwater resources, resource availability under different climate scenarios, environmental values, and their water requirements.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Urban Science is a scholarly international journal which provides a platform for the exchange of theories, ideas, methods, analyses, and comparative studies of urban and regional development. It is a peer-reviewed, open access journal that publishes high quality original articles, theoretical essays, critical reviews, research notes, and shorter communications. Its broad definition of “science” includes both quantitative and qualitative methods of social, environmental, and spatial analysis. There is no restriction on the maximum length of the papers.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [ESCI \(Web of Science\)](#) and [other databases](#).

Journal Rank: JCR - Q1 (Geography) / CiteScore - Q1 (Urban Studies)
