Message from the Guest Editor

Respiratory tract infections are responsible for millions of deaths annually. Vaccine formulations and policies are constantly updated to provide protection against severe respiratory diseases as RNA viruses continue to evolve. For instance, COVID-19 mRNA vaccines were recommended in the USA in 2022, but these vaccines are being updated to protect against SARS-CoV-2 variants. Specifically, the FDA has approved a monovalent Omicron XBB.1.5 COVID-19 vaccine which targets the current circulating variant. A recently developed COVID–influenza combination vaccine entered Phase 3 clinical trials in 2023. This vaccine was developed to offer dual protection against both influenza and COVID-19 in a single shot, increasing protection during the influenza season. Additionally, in 2023, a maternal RSV vaccine was also approved that is specifically designed to protect women who are 32–36 weeks pregnant during the RSV season. These are all examples of improvements in vaccine safety and effectiveness. We invite scholars developing or evaluating novel vaccine candidates against respiratory pathogens to submit their work to this Special Issue by July 2024.

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X) has had a 6-year history of publishing peer-reviewed state of the art research that advances the knowledge of immunology in human disease protection. Immunotherapeutics, prophylactic vaccines, immunomodulators, adjuvants and the global differences in regulatory affairs are some of the highlights of the research published that have shaped global health. Our open access policy allows all researchers and interested parties to immediately scrutinize the rigorous evidence our publications have to offer. We are proud to present the work and perspectives of many to contribute to future decisions concerning human health.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.**

Journal Rank: JCR - Q1 (Immunology) / CiteScore - Q1 (Pharmacology (medical))
