Message from the Guest Editor

Dear Colleagues,

Vaccine hesitancy, or the delay in accepting or refusing vaccines despite the availability of vaccination services, is a significant contributor to health disparities. Vaccine hesitancy is often caused by misinformation and disinformation, especially among medically underserved populations and those with low levels of health literacy. Vaccine awareness and education are important. Combating misinformation; supporting health literacy; vaccine access; vaccine champions for training, education, and advocacy; and innovative learning strategies can surmount vaccine hesitancy. This Special Issue will focus on laboratory and clinical vaccine research, utilization, and immunization strategies to reduce vaccine hesitancy, which may include long-term, cost-effective approaches to reduce vaccine-preventable disease burden. Circumstances within the scope of *Vaccines* that affect vaccine complacency, convenience, and confidence are of interest.

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X) has had a 6-year history of publishing peer-reviewed state of the art research that advances the knowledge of immunology in human disease protection. Immunotherapeutics, prophylactic vaccines, immunomodulators, adjuvants and the global differences in regulatory affairs are some of the highlights of the research published that have shaped global health. Our open access policy allows all researchers and interested parties to immediately scrutinize the rigorous evidence our publications have to offer. We are proud to present the work and perspectives of many to contribute to future decisions concerning human health.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.**

Journal Rank: JCR - Q1 (Immunology) / CiteScore - Q1 (Pharmacology (medical))
