Message from the Guest Editor

Poultry production is increasing globally to meet the demand of animal-source proteins. Chicken meat and eggs are cheap and readily available animal-source foods. Time and again, poultry production has faced setbacks across the globe due to infectious disease outbreaks at the farm level that not only lead to production and economic losses, but also put food security at risk.

Robust vaccines and stringent vaccination procedures supplemented with farm biosecurity are essential to control infectious diseases. To date, many vaccines are commercially available against major poultry diseases, with promising results that need to be validated by the broader scientific community. We are launching this Special Issue, “Vaccines against poultry diseases”, and welcome papers highlighting recent and modern approaches towards the development of next-generation poultry vaccines. We will also accept papers emphasizing the molecular diagnosis, epidemiology and control of poultry diseases.

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X) has had a 6-year history of publishing peer-reviewed state of the art research that advances the knowledge of immunology in human disease protection. Immunotherapeutics, prophylactic vaccines, immunomodulators, adjuvants and the global differences in regulatory affairs are some of the highlights of the research published that have shaped global health. Our open access policy allows all researchers and interested parties to immediately scrutinize the rigorous evidence our publications have to offer. We are proud to present the work and perspectives of many to contribute to future decisions concerning human health.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.**

Journal Rank: JCR - Q2 (Medicine, Research and Experimental) / CiteScore - Q1 (Pharmacology (medical))
