Message from the Guest Editor

Dear Colleagues,

Vaccinology dates back to the times when viruses were not known, and the first vaccine was developed to combat smallpox. Since then, our understanding of the host adaptive immune responses to infectious diseases has led to the development of a variety of vaccine platforms and vaccine technologies to prevent morbidity and mortality from a wide range of infectious diseases. Some of these technologies are well established while some others are still under development.

In this Special Issue, we shed light onto the latest advances in the field of vaccines against orthopoxviruses, with focus on mpox, which still causes outbreaks at the global level and has a significant impact, including in children, in endemic settings.

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X) has had a 6-year history of publishing peer-reviewed state of the art research that advances the knowledge of immunology in human disease protection. Immunotherapeutics, prophylactic vaccines, immunomodulators, adjuvants and the global differences in regulatory affairs are some of the highlights of the research published that have shaped global health. Our open access policy allows all researchers and interested parties to immediately scrutinize the rigorous evidence our publications have to offer. We are proud to present the work and perspectives of many to contribute to future decisions concerning human health.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPus / SciFinder, and other databases.**

Journal Rank: JCR - Q1 (Immunology) / CiteScore - Q1 (Pharmacology (medical))
