Message from the Guest Editors

Inflammatory diseases represent the most common pathology of the female lower genital tract. The immune spectrum of these diseases is based on the interaction between the pathological agent and the host immune response; failure of local and systemic immunological responses causes the establishment of a persistent infection and progression of the lesion. In addition, a significant role is covered by auto-immune diseases in the genital field. Genetic factors, immune system pathways, the genital microbiota microenvironment, and the host characteristics represent the most significant aspects involved in this field.

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X) has had a 6-year history of publishing peer-reviewed state of the art research that advances the knowledge of immunology in human disease protection. Immunotherapeutics, prophylactic vaccines, immunomodulators, adjuvants and the global differences in regulatory affairs are some of the highlights of the research published that have shaped global health. Our open access policy allows all researchers and interested parties to immediately scrutinize the rigorous evidence our publications have to offer. We are proud to present the work and perspectives of many to contribute to future decisions concerning human health.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPus / SciFinder, and other databases.**

Journal Rank: JCR - Q1 (Immunology) / CiteScore - Q1 (Pharmacology (medical))
