### Message from the Guest Editors

Dear Colleagues,

Thanks to technological advancement and investment, vaccines against many deadly diseases have been invented and are saving countless numbers of people. Vaccines are one of the most effective ways to save lives. However, often, the uptake of such vaccines is low. This low uptake has been a puzzle, given vaccines' high efficacy. One of the barriers to vaccination behaviors can be vaccine hesitancy, and such hesitancy might come from a lack of trust of the vaccine itself or authorities that provide vaccines. This Special Issue collects examples around the world on vaccine hesitancy and its connection with (a lack of) trust.

Dr. Ryoko Sato

## Message from the Editor-in-Chief

*Vaccines* (ISSN 2076-393X) has had a 6-year history of publishing peer-reviewed state of the art research that advances the knowledge of immunology in human disease protection. Immunotherapeutics, prophylactic vaccines, immunomodulators, adjuvants and the global differences in regulatory affairs are some of the highlights of the research published that have shaped global health. Our open access policy allows all researchers and interested parties to immediately scrutinize the rigorous evidence our publications have to offer. We are proud to present the work and perspectives of many to contribute to future decisions concerning human health.

## Author Benefits

**Open Access:** free for readers, with **article processing charges (APC)** paid by authors or their institutions.

**High Visibility:** indexed within **Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.**

**Journal Rank:** JCR - Q2 (Medicine, Research and Experimental) / CiteScore - Q1 (Pharmacology (medical))
