Message from the Guest Editors

The current global outbreak of SARS-CoV-2 has indicated that the population with pre-existing comorbidities like age, chronic inflammation, hypertension, cardiovascular disease, diabetes, etc., are vulnerable to a much-increased risk of morbidity and mortality viral diseases.

This Special issue will focus on discussing the immune response to viral infections and the disease development among patients with pre-existing comorbidities. Moreover, there is a need to explore how the underlying disease etiologies aggravate the disease progression. Hence, it is of paramount importance to analyze the challenges and options associated with the new and repurposed therapies and the scope of prebiotics or probiotics and vaccine development to prevent viral infections in patients with pre-existing comorbidities. As the current pandemic continues to escalate, we hope this special issue offers healthcare providers and researchers a greater and extensive understanding of the effect of pre-existing comorbidities on developing and treating viral infections.

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X), founded in 2013, now has a firm history of publishing peer-reviewed, state-of-the-art research papers on vaccines and vaccination in the broadest sense. Areas covered include, but are not limited to, novel and emerging vaccine technologies, building on in-depth knowledge of what constitutes a protective immune response. These can be new vaccines for old diseases, or old vaccines for new diseases. Vaccines against cancer and autoimmune diseases explicitly are also within the scope of the journal. Because public opinion and even government policies towards vaccines and vaccination have changed, vaccine policy and public health issues are major concerns. Climate change will also have an impact on the spread of infectious diseases, and thus also on vaccine and vaccination policies worldwide.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.**

Journal Rank: JCR - Q2 (Medicine, Research and Experimental) / CiteScore - Q1 (Pharmacology (medical))
