### Message from the Guest Editors

African swine fever (ASF) is currently the most threatening disease in domestic and wild pigs worldwide for which there is no commercial vaccine available. The presence of ASF on five continents, including large parts of Asia, makes ASF the worst livestock pandemic of this century. The causal agent, the African swine fever virus (ASFV), is a large and highly complex virus that affects both domestic and wild pigs, such as European and African wild pigs, making it difficult to eradicate in endemic areas with the coexistence of circulating viruses of different virulence. The purpose of this special issue of *Vaccines* is to update knowledge and research on important aspects of the disease related to virus infection, disease dynamics, diagnostic tools, and control strategies. Particular emphasis will be placed on research focused on studies with new vaccine candidates, including the elucidation of vaccine control strategies.

## Message from the Editor-in-Chief

*Vaccines* (ISSN 2076-393X), founded in 2013, now has a firm history of publishing peer-reviewed, state-of-the-art research papers on vaccines and vaccination in the broadest sense. Areas covered include, but are not limited to, novel and emerging vaccine technologies, building on in-depth knowledge of what constitutes a protective immune response. These can be new vaccines for old diseases, or old vaccines for new diseases. Vaccines against cancer and autoimmune diseases explicitly are also within the scope of the journal. Because public opinion and even government policies towards vaccines and vaccination have changed, vaccine policy and public health issues are major concerns. Climate change will also have an impact on the spread of infectious diseases, and thus also on vaccine and vaccination policies worldwide.

## Author Benefits

**Open Access:** free for readers, with **article processing charges (APC)** paid by authors or their institutions.

**High Visibility:** indexed within **Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.**

**Journal Rank:** JCR - Q2 (Medicine, Research and Experimental) / CiteScore - Q1 (Pharmacology (medical))
