Message from the Guest Editors

Dear colleagues,

Cancer vaccines are one of the main pillars of the cancer immunotherapy even in the era of checkpoint inhibitors. Indeed, although the latter have completely changed the scenario of cancer treatment, several patients do not benefit from them. However, the cancer vaccine field is still a work in progress field because an effective strategy has not been developed yet. The topic of the special issue will cover all the aspects involved in the vaccine research and development (i.e. identification of optimal target antigens, formulations, delivery strategies, adjuvants, combination with other immunomodulatory approaches).

Dr. Luigi Buonaguro

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X), founded in 2013, now has a firm history of publishing peer-reviewed, state-of-the-art research papers on vaccines and vaccination in the broadest sense. Areas covered include, but are not limited to, novel and emerging vaccine technologies, building on in-depth knowledge of what constitutes a protective immune response. These can be new vaccines for old diseases, or old vaccines for new diseases. Vaccines against cancer and autoimmune diseases explicitly are also within the scope of the journal. Because public opinion and even government policies towards vaccines and vaccination have changed, vaccine policy and public health issues are major concerns. Climate change will also have an impact on the spread of infectious diseases, and thus also on vaccine and vaccination policies worldwide.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.**

Journal Rank: JCR - Q2 (Medicine, Research and Experimental) / CiteScore - Q1 (Pharmacology (medical))
