Message from the Guest Editor

A tumor vaccine is an active method to specifically increase antitumor immune cells. In addition to CD8 T-cells, which play an essential role in tumor vaccination by directly killing tumor cells, innumerable reports have indicated that CD4 T-cells also have a direct cytotoxic activity against tumors. The main aim of this Special Issue is to gather the latest advances in the field of tumor immunology to optimize a tumor vaccine.

Potential topics for this Special Issue include, but are not limited to, the following:

- Immune adjuvants for a tumor vaccine;
- Immunological assessment of the tumor microenvironment;
- Combination of immunotherapy and chemoradiotherapy;
- Optimization of administration route and/or formula in a tumor vaccine;
- Immune cell polarization and immunotherapy;
- Impeding immune suppression in the tumor microenvironment;
- Re-education of immune cells in the tumor microenvironment;

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X) has had a 6-year history of publishing peer-reviewed state of the art research that advances the knowledge of immunology in human disease protection. Immunotherapeutics, prophylactic vaccines, immunomodulators, adjuvants and the global differences in regulatory affairs are some of the highlights of the research published that have shaped global health. Our open access policy allows all researchers and interested parties to immediately scrutinize the rigorous evidence our publications have to offer. We are proud to present the work and perspectives of many to contribute to future decisions concerning human health.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPus / SciFinder, and other databases.**

Journal Rank: JCR - Q1 (Immunology) / CiteScore - Q1 (Pharmacology (medical))
