Message from the Guest Editor

Dear Colleagues,

In this context, we would like to encourage and appreciate the presentation to this special issue of recent advances focused on the understanding of the molecular mechanisms involved in eliciting protective immune responses in different types of human and animal vaccines, the role of host factors in these responses as well as studies assessing the contribution of adjuvants and immunomodulatory molecules to vaccine immunogenicity.

Prof. Francisco Sobrino

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X) has had a 6-year history of publishing peer-reviewed state of the art research that advances the knowledge of immunology in human disease protection. Immunotherapeutics, prophylactic vaccines, immunomodulators, adjuvants and the global differences in regulatory affairs are some of the highlights of the research published that have shaped global health. Our open access policy allows all researchers and interested parties to immediately scrutinize the rigorous evidence our publications have to offer. We are proud to present the work and perspectives of many to contribute to future decisions concerning human health.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPus / SciFinder, and other databases.**

Journal Rank: JCR - Q1 (Immunology) / CiteScore - Q1 (Pharmacology (medical))
