Message from the Guest Editor

Viral diseases are the leading cause of economic losses in the swine industry. Vaccination is arguably the most cost-effective tool to control viral diseases to improve swine health and production. A thorough understanding of swine immune response to virus infection is important for vaccine development and implementation. This Special Issue of Vaccines is dedicated to highlighting the recent advances in swine viral vaccine and vaccinology. Topics of interest include novel vaccine design, vaccine efficacy under experimental and field conditions, influence of vaccines on virus transmission and evolution, swine immune response to a wild-type virus infection or vaccination and viral immune evasion.

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X) has had a 6-year history of publishing peer-reviewed state of the art research that advances the knowledge of immunology in human disease protection. Immunotherapeutics, prophylactic vaccines, immunomodulators, adjuvants and the global differences in regulatory affairs are some of the highlights of the research published that have shaped global health. Our open access policy allows all researchers and interested parties to immediately scrutinize the rigorous evidence our publications have to offer. We are proud to present the work and perspectives of many to contribute to future decisions concerning human health.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPus / SciFinder, and other databases.**

Journal Rank: JCR - Q1 (Immunology) / CiteScore - Q1 (Pharmacology (medical))
