Frontiers in Cross-Protective Vaccines

Message from the Guest Editors

The inclusion of cross-protective antigens is usually considered desirable when developing vaccines against different pathogens of several species and may also be important from a public health perspective. In this Special Issue, we encourage our colleagues to search within the abundant data available from all “omics” and other resources towards identifying promising cross-reactive antigens for vaccine development. Such vaccines may include single or multiple cross-reactive antigens and may help to prevent unpredictable homologous and heterologous infections. It is expected that this novel vaccine development approach will have a major impact in the context of disease prevention, while also having economic and practical advantages. We welcome your interesting research or review article covering these topics in our current Special Issue titled “Frontiers in Cross-Protective Vaccines”.

About the Journal

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X), founded in 2013, now has a firm history of publishing peer-reviewed, state-of-the-art research papers on vaccines and vaccination in the broadest sense. Areas covered include, but are not limited to, novel and emerging vaccine technologies, building on in-depth knowledge of what constitutes a protective immune response. These can be new vaccines for old diseases, or old vaccines for new diseases. Vaccines against cancer and autoimmune diseases explicitly are also within the scope of the journal. Because public opinion and even government policies towards vaccines and vaccination have changed, vaccine policy and public health issues are major concerns. Climate change will also have an impact on the spread of infectious diseases, and thus also on vaccine and vaccination policies worldwide.

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Medicine, Research and Experimental) /
CiteScore - Q1 (Pharmacology (medical))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.1 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the second half of 2025).
