Message from the Guest Editor

Dear Colleagues,

Leishmaniasis study is strictly related to the immunology field, the target of the parasite being part of the immunological compartment. Hence, its study is a model for the study of the immunity system and the many other pathologies and infections hitting it. Not only, it also is a paradigm for the study of inflammation, which is the pattern of the severe leishmaniasis, as well as of many diseases, COVID-19 the last among the world hitting plagues. Furthermore, climate change and conflicts can be a flywheel for leishmaniasis spread, threatening animal and human health.

Accordingly, this Special Issue aims to collect articles on all aspects of leishmaniasis, since all are important to allow advancing in fighting this vector-borne infection as well as in understanding of its etiopathogenesis. Thus, the following keywords cover only some of the invited issues since others are also welcome.

Hoping to give a contribution together to all kindly joining at this purpose.

Best Regards

Dr. Stefania Hanau

Message from the Editor-in-Chief

Veterinary Sciences (ISSN 2306-7381) is an international and interdisciplinary scholarly open access journal that aims at publishing research in all fields of veterinary medicine in a democratic way. We encourage scientists to publish their original research articles, reviews, communications, and short notes in as much detail as possible. Articles submitted that involve subjecting animals to unnecessary pain or suffering will not be accepted, and all articles must be submitted with the necessary ethical approval (please refer to the Ethical Guidelines for more information).

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (Veterinary Sciences) / CiteScore - Q1 (General Veterinary)
