Message from the Guest Editor

Dear Colleagues,

Echinococcosis is a disease with a worldwide distribution, causing significant public health problems in humans and important economic losses in animals. According to the World Health Organization (WHO), cystic echinococcosis (CE) has been ranked as one of the 17 neglected tropical diseases and listed alongside the most severe parasitic diseases in humans. This zoonosis is caused by a species of medical importance, *Echinococcus granulosus sensu lato* (s.l.), the etiological agent of CE.

This Special Issue has the purpose of collecting research findings on this wide topic by highlighting different aspects of echinococcosis that will improve scientific knowledge. These answers may play a key role in the management of programs of control and monitoring of echinococcosis in humans and animals for the eradication of the disease, particularly in endemic areas.

Dr. Cinzia Santucci

Message from the Editor-in-Chief

Veterinary Sciences (ISSN 2306-7381) is an international and interdisciplinary scholarly open access journal that aims at publishing research in all fields of veterinary medicine in a democratic way. We encourage scientists to publish their original research articles, reviews, communications, and short notes in as much detail as possible. Articles submitted that involve subjecting animals to unnecessary pain or suffering will not be accepted, and all articles must be submitted with the necessary ethical approval (please refer to the Ethical Guidelines for more information).

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Veterinary Sciences*) / CiteScore - Q2 (*General Veterinary*)
