Message from the Guest Editor

Ever since the discovery in the early 1950s, human adenoviruses, the cause of respiratory diseases of young children, have been the subject of intense basic research as well as efforts to engineer HAdV vectors to ameliorate human diseases. Though much information has been gleaned over the past 67 years from laboratory and clinical investigations, we still have an incomplete picture of the critical associations of HAdV with host cells and specific components of immune system.

Each contribution in the SI will highlight the progress made to acquire basic knowledge of HAdV host interactions and will indicate particular areas uncovered. Topics in the new SI include key steps in HAdV–host cell entry and immune interactions as well as structure-based investigations of virus and virus capsid protein associations with cell receptors and innate immune molecules. Involvement of HAd in human diseases such as ocular pathogenesis will be also described. Genetic and chemical approaches to alter the Ad capsid to avoid immune interactions as well as structural and functional analyses of “immunoprivileged” HAdV26 and HAd49 vaccine candidate vectors will also be discussed.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Viruses (ISSN 1999-4915) is an open access journal which provides an advanced forum for studies of viruses. It publishes reviews, regular research papers, communications, conference reports and short notes. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers. The full experimental details must be provided so that the results can be reproduced. We also encourage the publication of timely reviews and commentaries on topics of interest to the virology community and feature highlights from the virology literature in the 'News and Views' section.

Electronic files or software regarding the full details of the calculation and experimental procedure, if unable to be published in a normal way, can be deposited as supplementary material.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, AGRIS, and other databases.**

Journal Rank: JCR - Q2 (*Virology*) / CiteScore - Q1 (Infectious Diseases)
