Message from the Guest Editor

Dear Colleagues,

The significance of enterovirus in human health, together with the limited existing intervention strategies to combat enterovirus infection, makes it extremely urgent to better understand the biology of these viruses and to develop effective countermeasures to prevent them from infecting humans. The goal of this Special Issue is to provide a firm base for the most recent discoveries in enterovirus research, including the molecular and structural biology of the virus, virus–host interactions, viral pathogenesis, antiviral strategies, and vaccine development.

Dr. Xiao-Fang Yu

Message from the Editor-in-Chief

Viruses (ISSN 1999-4915) is an open access journal which provides an advanced forum for studies of viruses. It publishes reviews, regular research papers, communications, conference reports and short notes. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers. The full experimental details must be provided so that the results can be reproduced. We also encourage the publication of timely reviews and commentaries on topics of interest to the virology community and feature highlights from the virology literature in the 'News and Views' section.

Electronic files or software regarding the full details of the calculation and experimental procedure, if unable to be published in a normal way, can be deposited as supplementary material.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, AGRIS, and other databases.**

Journal Rank: JCR - Q2 (*Virology*) / CiteScore - Q1 (Infectious Diseases)
