### Message from the Guest Editors

Dear Colleagues,

Viral diseases are one of the main threats to fish farming worldwide. Although some fish viruses have been known for a long time, many aspects of viral biology are still unknown, and above all, there is a lack of effective ways to prevent and control viral infections in fish. In addition, the emergence of new infections, their host range, and the interaction with those host species must be studied. Finally, the effect of climate change on both farmed fish species and viral agents demands attention. For all these reasons, this Special Issue is devoted to and welcomes all contributions (research articles, short communications, or reviews) focused on any aspect of current research into fish viruses.

## Message from the Editor-in-Chief

*Viruses* (ISSN 1999-4915) is an open access journal which provides an advanced forum for studies of viruses. It publishes reviews, regular research papers, communications, conference reports and short notes. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers. The full experimental details must be provided so that the results can be reproduced. We also encourage the publication of timely reviews and commentaries on topics of interest to the virology community and feature highlights from the virology literature in the 'News and Views' section.

Electronic files or software regarding the full details of the calculation and experimental procedure, if unable to be published in a normal way, can be deposited as supplementary material.

## Author Benefits

**Open Access:** free for readers, with **article processing charges (APC)** paid by authors or their institutions.

**High Visibility:** indexed within **Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, AGRIS, and other databases.**

**Journal Rank:** JCR - Q2 (*Virology*) / CiteScore - Q1 (Infectious Diseases)
