closed (25 November 2022)

Message from the Guest Editors

Dear Colleagues,

Hepatitis E virus (HEV) is one of the most important causes of viral hepatitis globally. HEV is actually an umbrella term for a large group of variants, many of which can cause human infections. Through multiple transmission routes (food-borne zoonotic, human-to-human, blood-borne), HEV has established niches in various epidemiological settings. The clinical spectrum of hepatitis E ranges from asymptomatic infection to fulminant hepatitis. Extrahepatic manifestations are increasingly recognized and immunocompromised patients are prone to persistent infections.

This Special Issue ‘Hepatitis E Virus (HEV)’ seeks to publish high-quality original research and review articles on unanswered questions in the field of hepatitis E pathogenesis, epidemiology, clinical management, and control. Both clinical research and basic research with translational relevance are welcome.

Dr. Siddharth Sridhar

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Viruses* (ISSN 1999-4915). *Viruses* is published in open access format—research articles, reviews and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Viruses* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.**

Journal Rank: JCR - Q2 (Virology) / CiteScore - Q1 (Virology/Infectious Diseases)
