Deadline for manuscript  
submissions:

**31 October 2024**

### Message from the Guest Editor

Dear Colleagues,

*Viruses* invites the submission of original research and review articles to this Special Issue, covering challenges in HIV diversity. The articles can cover any level of diversity, from inpatient immune evasion and development of drug resistance, to global challenges for vaccine design. Reports of research on HIV recombination at all levels, from inpatient to inter-subtype, are encouraged. Although HIV-1 M-group viruses comprise the majority of global AIDS cases, submissions of research on other immunodeficiency viruses is also encouraged. Topics of interest can include challenges in methods (challenges of amplifying and sequencing viral genomes, for example) and computation (challenges with multiple sequence alignment, phylogenetic analyses, recombination detection, etc.). Analyses of trends in drug resistance, immune evasion or epidemiology are well suited for this Special Issue. Although submissions should focus on immunodeficiency viruses, comparisons or contrasts to other viruses can be illuminating and useful.

Dr. Brian T. Foley  
*Guest Editor*

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

*Viruses* (ISSN 1999-4915) is an open access journal which provides an advanced forum for studies of viruses. It publishes reviews, regular research papers, communications, conference reports and short notes. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers. The full experimental details must be provided so that the results can be reproduced. We also encourage the publication of timely reviews and commentaries on topics of interest to the virology community and feature highlights from the virology literature in the 'News and Views' section.

Electronic files or software regarding the full details of the calculation and experimental procedure, if unable to be published in a normal way, can be deposited as supplementary material.

## Author Benefits

**Open Access:** free for readers, with **article processing charges (APC)** paid by authors or their institutions.

**High Visibility:** indexed within **Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, AGRIS, and other databases.**

**Journal Rank:** JCR - Q2 (*Virology*) / CiteScore - Q1 (Infectious Diseases)
