Message from the Guest Editors

Dear Colleagues,

The current Covid-19 pandemic and the frequent emergence and re-emergence of novel viruses highlights the urgent need for effective antivirals. The fact that every virus needs host cells to replicate sparked increasing interest in host-directed drugs that act as antivirals (host-targeted antivirals, HTA). While this approach had been heavily debated 20 years ago, the idea to target host functions for antiviral therapy was boosted due to technical developments such as cell-omics approaches and has now become widely accepted. (inhibitors of cell signaling pathways have received special attention in this respect). In this Special Issue, we want to summarize the latest findings in this field and would like to encourage research groups working on host-targeted antivirals to submit their latest findings.

Message from the Editor-in-Chief

Viruses (ISSN 1999-4915) is an open access journal which provides an advanced forum for studies of viruses. It publishes reviews, regular research papers, communications, conference reports and short notes. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers. The full experimental details must be provided so that the results can be reproduced. We also encourage the publication of timely reviews and commentaries on topics of interest to the virology community and feature highlights from the virology literature in the 'News and Views' section.

Electronic files or software regarding the full details of the calculation and experimental procedure, if unable to be published in a normal way, can be deposited as supplementary material.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus**, **SCIE (Web of Science)**, **PubMed**, **MEDLINE**, **PMC**, **Embase**, **PubAg**, **AGRIS**, and **other databases**.

Journal Rank: JCR - Q2 (*Virology*) / CiteScore - Q1 (Infectious Diseases)
