Deadline for manuscript
submissions:

closed (30 June 2021)

Message from the Guest Editors

Viral infections can have devastating effects on the health and welfare of companion animals and are therefore of direct importance for their owners. Major infections include feline coronavirus (related to the novel coronavirus currently the focus of media attention), virulent systemic variants of feline calicivirus, canine distemper virus infections of dogs and large felids and equine herpes virus and West-Nile virus that cause severe diseases in horses. Companion animal viruses such as rabies virus have zoonotic potential, and the significance of the recently discovered feline gammaherpesvirus and morbillivirus is unknown. Thus, improved knowledge on the pathogenesis, diagnosis, prevention and control of companion animal viral infections is crucial.

Submissions are invited from researchers working in fields relating to viral infections in companion animals. Submissions from participants presenting on this topic at the 2020 symposium of the International Society for Companion Animals (ISCAID) in Glasgow, Scotland from September 6-9, will be particularly welcome and will receive a 10% discount for Article Processing Charge.

Message from the Editor-in-Chief

Viruses (ISSN 1999-4915) is an open access journal which provides an advanced forum for studies of viruses. It publishes reviews, regular research papers, communications, conference reports and short notes. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers. The full experimental details must be provided so that the results can be reproduced. We also encourage the publication of timely reviews and commentaries on topics of interest to the virology community and feature highlights from the virology literature in the 'News and Views' section.

Electronic files or software regarding the full details of the calculation and experimental procedure, if unable to be published in a normal way, can be deposited as supplementary material.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, AGRIS, and other databases.**

Journal Rank: JCR - Q2 (*Virology*) / CiteScore - Q1 (Infectious Diseases)
