Clinical Laboratory, Department for Clinical Diagnostics and Services, Vetsuisse Faculty, University of Zurich, Zurich, Switzerland

**Prof. Dr. Margaret Hosie**

Centre for Virus Research, MRC-University of Glasgow, Glasgow, UK

Deadline for manuscript submissions:

**closed (30 June 2024)**

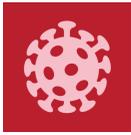

### Message from the Guest Editors

Dogs and cats are common companion animals, but horses, donkeys, and exotic pets also share our lives. Companion animals are often our best friends, and there is abundant evidence that interactions between humans and their pets afford improved well-being and health advantages.

Viral infections can seriously impact companion animals' health and life expectancy, which has direct importance for their owners. Viruses with zoonotic potential are of great importance in a One Health context, including SARS-CoV-2, which infects companion animals via close contact with humans. Finally, the novel emerging viruses feline gammaherpesvirus and morbillivirus require investigation. Thus, increased knowledge on the pathogenesis, diagnosis, prevention, and control of viral infections in companion animals is of outstanding importance.

Submissions are invited from researchers studying viral infections in companion animals. Studies presented during the 2022 symposium of the International Society for Companion Animals (ISCAID) that will be held in Glasgow, Scotland are particularly welcome.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

*Viruses* (ISSN 1999-4915) is an open access journal which provides an advanced forum for studies of viruses. It publishes reviews, regular research papers, communications, conference reports and short notes. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers. The full experimental details must be provided so that the results can be reproduced. We also encourage the publication of timely reviews and commentaries on topics of interest to the virology community and feature highlights from the virology literature in the 'News and Views' section.

Electronic files or software regarding the full details of the calculation and experimental procedure, if unable to be published in a normal way, can be deposited as supplementary material.

## Author Benefits

**Open Access:** free for readers, with **article processing charges (APC)** paid by authors or their institutions.

**High Visibility:** indexed within **Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, AGRIS, and other databases.**

**Journal Rank:** JCR - Q2 (*Virology*) / CiteScore - Q1 (Infectious Diseases)
