Message from the Guest Editors

The first vaccine against a viral infection was developed in 1798 for smallpox by Dr Edward Jenner, who utilized cow pox. This vaccine enabled the eradication of smallpox from the world in 1980. Thus, vaccination is a powerful tool for protection from pathogens, also applicable for the prevention of other diseases, including cancer.

Vaccines for many viral infections still need to be developed. Examples of diseases that could be controlled by vaccination are human immunodeficiency virus infection, hepatitis C, respiratory syncytial virus infection, severe acute respiratory syndrome coronavirus-2 disease. This Special Issue focuses on recent progress in the development of vaccines. Also, we welcome application studies of vaccines. This Special Issue aims to contribute to our knowledge of vaccine development and provide an opportunity to spread new information on vaccine research.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Viruses (ISSN 1999-4915) is an open access journal which provides an advanced forum for studies of viruses. It publishes reviews, regular research papers, communications, conference reports and short notes. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers. The full experimental details must be provided so that the results can be reproduced. We also encourage the publication of timely reviews and commentaries on topics of interest to the virology community and feature highlights from the virology literature in the 'News and Views' section.

Electronic files or software regarding the full details of the calculation and experimental procedure, if unable to be published in a normal way, can be deposited as supplementary material.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, AGRIS, and other databases.**

Journal Rank: JCR - Q2 (*Virology*) / CiteScore - Q1 (Infectious Diseases)
