Deadline for manuscript
submissions:

31 March 2025

Message from the Guest Editor

Dear Colleagues,

With the control of point source pollution, non-point source pollution induced by rainfall runoff has been a primary source for water bodies. Therefore, the study regarding non-point source pollution has become a hotspot in the environmental field. The aim of this Special Issue is to provide a platform to disseminate the recent advances in sources, modelling and analysis regarding non-point source pollution in water bodies.

The specific thematic topics of interest in this Special Issue include the following:

1. Novel methods and techniques for detecting and quantifying contaminants in non-point source pollution.
2. Monitoring and modeling approaches for non-point source pollution analysis.
3. Modeling and analyzing methods for non-point source pollution sources in water bodies.
4. Holistic risk assessment of non-point source pollution for water bodies.
5. Technology and strategy to prevent non-point source pollution for water bodies.

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
