Water Resources under Growing Anthropogenic Loads, Volume II

Guest Editor:

Prof. Dr. Tatyana Moiseenko

Vernadsky Institute of Geochemistry and Analytical Chemistry of Russian Academy of Sciences, Moscow, Russia

Deadline for manuscript submissions: closed (30 July 2023)

Message from the Guest Editor

Dear Colleagues,

Taking into account the high importance of fresh water to the world's population and for the preservation of its species diversity, the high relevance of water resources studies under the influence of increasing anthropogenic loads is obvious. Climate warming also leads to changes in hydrological cycles and the cycle of elements and substances. The aim of this Special Issue is to combine the results of studies on the anthropogenic impact on water resources and water quality, forecasts of the consequences of increasing anthropogenic loads in conditions of climate warming, and assessments of reducing the negative consequences of water pollution and water restoration.

The scope of the Special Issue includes:

Chemistry and biology of water under point-source and diffuse water pollution, airborne pollution of catchments, as well as aquatic ecosystem health assessments;

Nutrient loads and eutrophication, acid loads and acidification, critical values and recovery from a long-term perspective;

Climate warming impacts on water resources;

Mathematical modeling, systems analysis, and beneficial use of big data related to the anthropogenic water cycle and quality.

Editor-in-Chief

Dr. Jean-Luc PROBST

Laboratory of Functional Ecology and Environment, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, France

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. Water invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological scientific domains and and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
