## Advances in River Ice Science and Its Environmental Implications

Guest Editors:

### **Dr. Spyros Beltaos**

National Water Research Institute  
of Environment Canada,  
Burlington, ON L7R 4A6, Canada

### **Brian C. Burrell**

Hilcon Limited, Fredericton, NB  
E3B 3P7, Canada

Deadline for manuscript  
submissions:

**closed (30 September 2023)**

### **Message from the Guest Editors**

Dear Colleagues,

Ice formation, growth, and breakup in rivers modify flow configuration and hydrodynamic forces in ways that can impact aquatic life, water quality, and sediment transport, as well as cause the flooding of riverside communities and damage to infrastructure. River ice can also interfere with road transportation and navigation. Field and laboratory observations enhance the understanding of physical processes, which in turn, leads to the development of predictive tools such as quantitative relationships and mathematical models. This Special Issue aims to gather high-quality papers that will improve the state-of-the-art. Submitted papers will undergo a peer-review process performed by independent reviewers. Original research papers and reviews are invited to the Special Issue.

### **Relevant topics include:**

- Hydroclimatic aspects of freeze-up, winter, and breakup processes;
- River ice impacts on stream ecology, including floodplains and deltas;
- Ice-affected water quality and sediment transport;
- Ice jam flooding potential, including forecasting, remediation, and risks to infrastructure;
- Hydrodynamic processes resulting from ice jam releases.

## Editor-in-Chief

### Dr. Jean-Luc PROBST

Laboratory of Functional Ecology and Environment, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, France

## Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
