Application of New Technology in Water Mapping and Change Analysis

Guest Editors:

Dr. Zhenhua Zou

Department of Geographical Sciences, University of Maryland, College Park, MD 20742, USA

Dr. Yan Zhou

School of Geography and Environmental Science, Henan University, Kaifeng 475000, China

Deadline for manuscript submissions:

20 December 2024

Message from the Guest Editors

Dear Colleagues,

Water resources are essential for human societies, environments, and various species. This Special Issue aims to compile research concerning various aspects of mapping and the change analysis of water resources. Potential research topics include, but are not limited to, the following:

- Developing methods for mapping and monitoring the surface water extent and volume using different remote sensing data (e.g., optical, SAR, LiDAR, GRACE, UAV) to assess water availability.
- Utilizing machine learning and artificial intelligence techniques to analyze large volumes of remote sensing data and extract meaningful information about water bodies.
- Investigating the relationship between extreme weather events (floods, droughts) and water body dynamics using remote sensing data and precipitation estimates.
- Combining remote sensing data with ground-based measurements (e.g., water quality sensors, water level gauges) to develop robust and validated water monitoring systems. [...]

Editor-in-Chief

Dr. Jean-Luc PROBST

Laboratory of Functional Ecology and Environment, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, France

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
