The Application of Innovative Biotechnology in Sewage Purification

Guest Editors:

Dr. Xiaoyuan Zhang
College of Environmental Science and Engineering, Nankai University, Tianjin 300350, China

Dr. Bin Ji
Department of Water and Wastewater Engineering, School of Urban Construction, Wuhan University of Science and Technology, Wuhan 430070, China

Dr. Shulian Wang
School of Civil Engineering, Architecture and Environment, Hubei University of Technology, Wuhan, China

Deadline for manuscript submissions:
20 November 2024

Message from the Guest Editors

The increasing impact of global climate change presents significant challenges for sustainable water and wastewater management practices. There is a high demand for innovative methods and technologies for water and wastewater treatment, with a primary focus on reducing greenhouse gas emissions, while ultimately achieving carbon neutrality. In the context of carbon neutrality and the circular economy, exploring emerging environmental biotechnology for water and wastewater purification offers a great opportunity to improve process efficiency in terms of treatment and energy usage, while in the meantime cutting down carbon emissions.

Given this, the primary objective of this Special Issue is to explore innovative biotechnologies contributing to sustainable water and wastewater treatment, while addressing the current demand for energy and carbon neutrality under the circular economy framework. Researchers are cordially invited to submit original works on the above-described subject.

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.
Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
