# **Biodiversity of Freshwater and Marine Ecosystems in Tropical Asia**

Guest Editor:

### Dr. Evgeniy S. Gusev

A.N. Severtsov Institute of Ecology and Evolution, Russian Academy of Sciences, Leninsky Prospect 33, 119071 Moscow, Russia

Deadline for manuscript submissions:

closed (25 February 2024)

# **Message from the Guest Editor**

The study of biodiversity is still one of the most important topics in biology. The ecosystems of tropical regions are considered to be among the richest in species and most complex in structure. Tropical Asia includes several very important biodiversity hotspots, associated with tropical forests, mountain systems, wetlands, coral reefs, and islands. However, this region is still poorly studied. This is true for aquatic ecosystems. Gaps in their study are associated both with the general paucity of studies devoted to the study of the structure and functioning of such ecosystems, and the very poor knowledge of the diversity of aquatic organisms. This is true for both freshwater and marine ecosystems in tropical Asia. Another important problem in the region is the excessive anthropogenic pressure on ecosystems, which leads to the reduction and disappearance of natural communities and their replacement by agricultural or urbanized elements. In order to avoid the destruction of unique ecosystems and organize their protection, it is necessary to intensify biodiversity research and the publication of these results.

Laboratory of Functional Ecology and Environment, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, France

## **Message from the Editor-in-Chief**

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. Water invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to technological scientific domains and interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

### **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
