Slope Stability Analyses and Landslide Risk Assessment under Hydrodynamic Action

Guest Editors:

Prof. Dr. Zheng-Yi Feng

Department of Soil and Water Conservation, National Chung Hsing University, Taichung, Taiwan

Prof. Dr. Cheng-Yu Ku

Department of Harbor and River Engineering, National Taiwan Ocean University, Keelung, Taiwan

Prof. Dr. Frank Tsai

Department of Civil and Environmental Engineering, Louisiana State University, Baton Rouge, LA, USA

Deadline for manuscript submissions:

20 November 2024

Message from the Guest Editors

Dear colleagues,

We invite researchers, academics, and practitioners to contribute their insights and recent findings to our Special Issue focused on "Slope Stability Analyses and Landslide Risk Assessment under Hydrodynamic Action".

This Special Issue aims to record a diverse range of studies that address the complexities of slope stability and landslide risk using various new approaches, such as analytical and numerical models, remote sensing technologies, machine learning algorithms, artificial intelligence, geospatial data analysis, etc.

We also welcome detailed analyses and lessons learned from specific case studies of landslides, water erosion, and sediment transport for their monitoring, prewarning, prevention, and mitigation.

We look forward to your submissions and to advancing the knowledge in this field.

Editor-in-Chief

Dr. Jean-Luc PROBST

Laboratory of Functional Ecology and Environment, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, France

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
