Message from the Guest Editor

Dear Colleagues,

Studies of biogeography and mechanisms of speciation of organisms have attracted researchers for a long time. Research methodology and concepts have changed over time. To date, a large amount of data on the diversity of organisms has been accumulated, but it requires generalization. The use of new molecular genetic approaches allowed to reveal even greater diversity than previously thought, and also made it possible to more effectively and reliably solve problems in the study of speciation and the geographical distribution of organisms. But at the same time, most of the research is focused on a rather limited area, and many regions of the World have not yet been fully explored, especially hard-to-reach mountain systems, areas of the tropical region, the Arctic and Antarctic. Inclusion of the results of the study of such territories often allows one to significantly expand the understanding of the diversity and biogeography of individual groups of organisms and the overall biodiversity as a whole. [...]

Special Issue

water

an Open Access Journal by MDPI

Editor-in-Chief

Dr. Jean-Luc PROBST

Laboratory of Functional Ecology and Environment, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, France

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
