The Artificial Intelligence Models for Landslide Hazard Assessment

Guest Editors:

Prof. Dr. Francesco Sdao

School of Engineering, University of Basilicata, Campus Macchia Romana, Potenza (Italy)

Dr. Filomena Canora

School of Engineering, University of Basilicata, Campus Macchia Romana, Potenza (Italy)

Deadline for manuscript submissions:

closed (30 September 2019)

Message from the Guest Editors

We would like to invite you to participate in this Special Issue, which will focus primarily on the study and the application of the artificial intelligence methods for landslide hazard assessment and mapping in anthropic areas (urban areas, roads, communication infrastructures, etc.).

The assessment of landslide susceptibility and hazard has been recognized by the scientific community as one of the most significant tools in the landslide and monitoring studies for landslide risk evaluation and its management and mitigation.

Over the last decades, several methods, both qualitative and quantitative, for landslide hazard assessment and mapping have been developed, such as geomorphological approach, heuristic approach, probabilistic and deterministic approach, statistical analysis, and multicriteria decision-making models.

Editor-in-Chief

Dr. Jean-Luc PROBST

Laboratory of Functional Ecology and Environment, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, France

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
