## Advances in Tools and Models for Water Energy Food Nexus (WEF) Assessment

Guest Editor:

**Prof. Dr. Yizi Shang**

State Key Laboratory of  
Simulation and Regulation of  
Water Cycles in River Basins,  
China Institute of Water  
Resources and Hydropower  
Research, Beijing, China

Deadline for manuscript  
submissions:

**closed (20 February 2024)**

### Message from the Guest Editor

Dear Colleagues,

This Special Issue aims to gather innovative research contributions focused on the interconnections and interactions between water, energy, and food systems. It seeks to explore cutting-edge tools, methodologies, and models that facilitate a comprehensive assessment of the Water Energy Food Nexus (WEF). The primary objective is to address the intricate relationships between these critical resources, considering their mutual dependencies, trade-offs, and synergies. Furthermore, this Special Issue also endeavours to incorporate advanced methodologies for assessing water, carbon, ecological and/or land footprints, etc., thereby providing a holistic understanding of the environmental implications within the WEF nexus.

The contributions within this issue will not only enhance theoretical knowledge but also offer practical implications for integrated decision making and resilient resource governance. Ultimately, the collaborative efforts showcased in this Special Issue aim to pave the way for a more interconnected, efficient, and environmentally conscious approach to managing the complex interactions among water, energy, and food systems.

## Editor-in-Chief

### **Dr. Jean-Luc PROBST**

Centre de Recherche sur la Biodiversité l'Environnement (CRBE) UMR CNRS/UPS/INPT/IRD, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, Toulouse, France

## Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
